RESEARCH INTERESTS

My research focuses on understanding why adolescents exposed to similar family adversity follow divergent developmental trajectories of antisocial behavior. Building on my experience in psychological assessment and research on legal decision-making, I aim to move beyond single-time-point assessments to understand how developmental processes and environmental contexts jointly shape the onset, escalation, persistence, and desistance of antisocial behavior across adolescence and into emerging adulthood. I also hope to examine how social and institutional responses, as well as disparities in access to support, relate to these trajectories.
